

PROJECT PROFILE

Project Title	Golden Crust Cake's
Objective:	To make cake ordering easy and simple for customers.
Platform:	Server Side – Windows 10 or Windows 11
	Client Side – Any Browser Supported
Front End & Back End :	HTML, CSS, JavaScript, PHP
DataBase:	MYSQL
Editor:	VS Code
Project Team Size:	3 Member
Developed By:	1. Degama Bansi 2. Sasiya Riddhi 3. Rathod Riya
Submitted to:	M.M.G. Mahila Arts & Commerce Collage, Junagadh.

INTRODUCTION&OBJECTIVE

- Introduction
- title
- Object

Introduction

The main aim behind this project is to provide an easy and convenient **online cake ordering system** for customers. In today's busy lifestyle, people may not have enough time to visit a bakery or cake shop to select and purchase cakes. This project provides an online platform where customers can view different types of cakes, check their details and prices, add cakes to the cart, place orders and manage their purchases easily.

The **Golden Crust Cake's** website provides different varieties of cakes such as **Chocolate, Fruit, Bundt, Velvet and Celebration cakes**. Customers can browse the available cakes, view cake images, descriptions, prices and stock availability.

The website makes the cake purchasing process simple, fast and user-friendly. Customers can register and login to the website, select their favourite cakes, add them to the wishlist or cart, proceed to checkout and place their orders online.

Title : - GOLDEN CRUST CAKE'S

Golden Crust Cake's is basically a web-based **Online Cake Ordering System** developed using **PHP** for server-side programming and **MySQL** for database management. The project can be developed and maintained using **Visual Studio Code** and run through a local server environment such as XAMPP.

The Internet has made online shopping and ordering easier and faster. In today's busy life, people prefer online services because they can save time and order products from their homes. Therefore, this project provides a simple and convenient platform for customers to explore and order cakes online.

Objective :

Wireless world is a web application from which any person can Purchase Product online without physically presence of person. All the related information of the Product can be provided by this website .So the person can get each and every information of the Product.

TOOLS AND TECHNOLOGY

Introduction of PHP:-

PHP is a server side scripting language designed for web development but also used as a General-purpose programming language. PHP is now installed on more than 244 Million websites and 2.1 million web servers. Originally created by Rasmus Lerdorf in 1995, the reference implementation of PHP is now produced by The PHP Group. While PHP originally stood for Personal Home Page, it now stands for PHP:

Hypertext Preprocessor, a recursive acronym.

PHP code is interpreted by a web server with a PHP processor module, which generates The resulting web page: PHP commands can be embedded directly into an HTML source Document rather than calling an external file to process data. It has also evolved to Include a command-line interface capability and can be used in standalone Graphical applications.

❖ **FEATURES:-**

➤ The features is following:

(1) Open Source

- ◆ PHP is freely available for use. The community of open source PHP developers provides technical support and is constantly improving updating the core PHP functionalities. PHP is available at free of cost under PHP General Public License and most of its associative required software's like MySQLi, Text Editors and Apache Server are also freely available, so it proves very cost effective for the developers.

(2) Cross-Platform

- ◆ PHP provides high compatibility with leading operating systems and web servers such as thereby enabling it to be easily deployed across several different platforms. PHP scripts can run across operating systems such as Linux, Windows, Solaris, OpenBSD, Mac OSX etc and also provide support for all major web servers such as Apache, IIS, iPlanet etc.

(3) Power

- ◆ Several web tasks can now be easily perform using PHP. For example now we can develop from small websites to giant business and organizational websites, informative forums, chatting platforms, CRM solutions, e-commerce shopping carts, community websites, e-business, shopping carts and gigantic database driven sites.

(4) User Friendly

- ◆ Designed in a user friendly manner, PHP gives more flexibility than C, C++ and ASP and overall helps in increasing traffic to the site.

(5) Quick

- ◆ PHP is designed to work well with the web, and so things like accessing the GET and POST and working with HTML and URLs are built-ins in the PHP language. This makes it really concise and straightforward to make a website.

(6) Extensions

- ◆ Being an open source language, a large number of libraries and extensions, to extend its core functionalities, are available for download. The source code of PHP can be modified to include custom created extensions and components thereby increasing its extensibility.

(7) Easy Deployment

- ◆ There are many hosting companies that will, for a few dollars a month, give you a server running PHP so you can make a website really easily.

(8) Community Support

- ◆ A huge advantage that PHP offers is its community. If you are looking for a particular script, chances are another user has already created something similar. Check within the PHP community for availability. Likewise, if you have created a function that others might enjoy, be sure to post the code for others.

(9) Security

- ◆ PHP offers security as well that helps prevent malicious attacks. These security levels can be adjusted in the .ini file.

MYSQLi

The MYSQLi extension was introduced with PHP version 7.1.32 and the MYSQLi Native Driver was included in PHP version 7.1.32i stands for improved in MYSQLi and provides various functions to access the MYSQLi database and to manipulate the data records inside the MYSQLi database. You would require to call the MYSQLi functions in the same way you call any other PHP function.

- Simply MYSQLi is,
 - ◆ MYSQLi is a database system used on the web
 - ◆ MYSQLi is a database system that runs on a server
 - ◆ MYSQLi is ideal for both small and large applications
 - ◆ MYSQLi is very fast, reliable, and easy to use
 - ◆ MYSQLi supports standard SQL
 - ◆ MYSQLi compiles on a number of platforms
 - ◆ MYSQLi is free to download and use
 - ◆ MYSQLi is developed, distributed, and supported by Oracle Corporation
 - ◆ The data in MYSQLi stored in tables. A table is a collection of related data, and it consists of columns and rows.

Tool Used:

 This project is developed using the tools, which are most suited for development of the Application Package. These tools are as follows: -

- ✓ **Front End:**HTML,CSS,JAVASCRIPT
- ✓ **Back End :** PHP
- ✓ **DataBase:**MySQL

❖ Google Chrome:

- Google Chrome 7.0 and more make it easier to get the most from the World Wide Web, whether you are searching for new information or browsing your favorite websites. Built-in intelligent technology can save you time by completing routine web tasks, such as automatically completing web addresses and forms, translating web pages, and providing a fast, secure, and reliable browsing experience.

❖ Description

- ✓ **Golden Crust Cake's** is a web application for **online cake ordering**. The basic users of this system are **Administrator and Registered Users**. This web application provides features such as user registration, login, browsing cakes, adding cakes to cart/wishlist, and purchasing cakes online.
- ✓ The scope of the **Administrator** is to manage cakes and categories, add/update/delete cake information, manage users, view orders and purchases made by users, and manage feedback.
- ✓ The scope of the **Users** is to register and login to the website, view different cakes based on categories, check cake details and prices, add cakes to wishlist or cart, select the required quantity, and place orders online.:

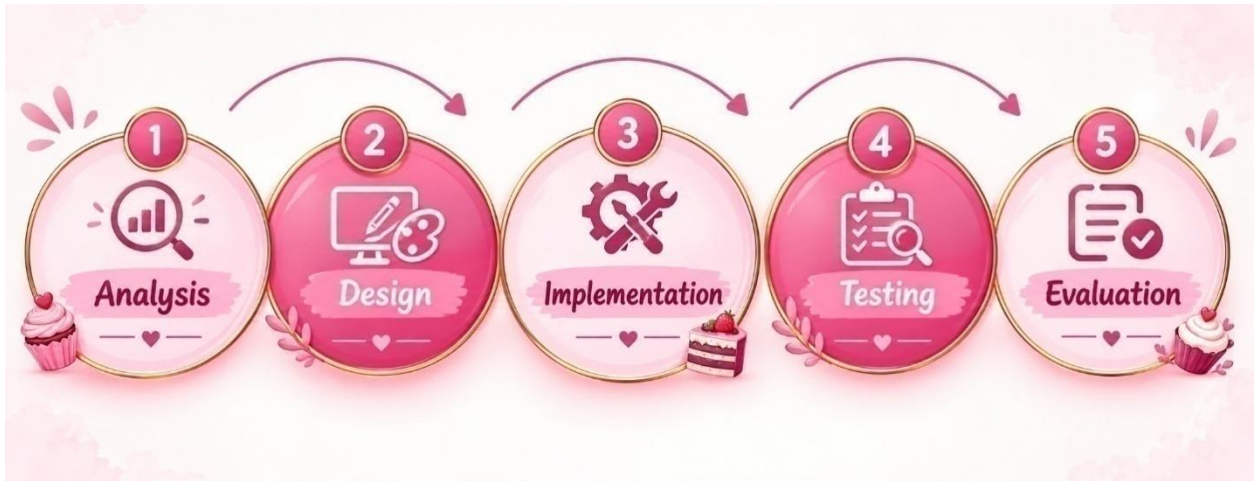

Registered User:-The role of the registered user is to manage his profile. Registered User can make purchase of shopping Products and give feedback about site.

Simple User:- The role of the simple user can see the hardware Products and give feedback but can't purchase product without login. Once the simple user registered in the web site he will get the full functionality of the website.

Administrator:- The role of the administrator is to send purchased products to the registered user and view feedback as well as it can manage category and items....

Analysis

- ❏ All projects follow a life cycle model (SDLC). The most widely used SDLC model in my project is:

- ❖ **Analysis:** Before a program is created, they have to know what they want to create. To understand the nature of the program to be built we must understand the information domain for the software as well as required function behavior, performance and interface requirements for both the system.
- ❖ **Designing:** once the analysis is done now it's time for designing. It is the process by which a person creates a specification of a software artifact, intended to accomplish goals, using a set of primitive components and subject to constraints. Software design usually involves problem solving and planning a software solution. This includes both low-level component and algorithm design and high-level, architecture design.
- ❖ **Coding:** The design must be translated in machine readable form. It performs this task. If design is performed in a detailed manner, code generation can be accomplished mechanically.
- ❖ **Testing:** once code has been generated, software testing begins. It is done before the release to the final audience. Software testing is meant to see how the software works under different conditions. Testing is done to understand if it will work correctly, partially fail to work properly, or totally fail to work properly. Each test may be used to see how one, or many, parts of the software work at a point in its development.

- Prescriptive process models define a distinct set of activities, actions, tasks, milestones, and work products, that are required to engineer high-quality software. They do provide a useful roadmap for software engineering work.
- We discuss here the strategy of the system development in detail as the Register and search Application is developed using this strategy.
- The SDLC method is classically thought of as the set of activities that Analyst, designer and user carry out to develop and implement an information system. This method consists of six steps. In most business situations the activities are all closely related, usually inseparable and even order of the steps in these activities may be difficult to determine. Different parts of the project can be in various phases at the same time, with some components undergoing analysis while other is at advanced design stages.....

PROJECT LIFE CYCLE SDLC

(1)SYSTEM ANALYSIS:-

Problem Definition

-  Nowadays, people may not have enough time to visit a bakery or cake shop and search for their required cakes.
-  In modern times, people want to get cakes at their doorstep without spending too much time visiting a bakery.
-  Customers may face difficulties in finding their desired cake, checking its price and availability by visiting the shop physically.
-  People do not like to wait in queues for purchasing cakes or making payments.
-  An **online cake ordering system** provides an easy and convenient way for customers to select and order cakes online.
-  This project is developed using **PHP** for the application and **MySQLi Server** as the back-end database, which helps reduce the effort and time required by users.

Modules of the Project

❖ Client Module:

-  Each customer who wants to order cakes online must first **register on the website**. During registration, the customer enters details such as **Name, Address, Phone Number, E-Mail ID, User ID and Password**.
-  Once the registration is completed, the customer can **sign in to the website** and view different types of cakes, select the required cake, add it to the cart and **place an order online**.

❖ Administrators Module

-  The Administrator module is protected by **User ID and Password**. Ordinary customers are not permitted to enter or access the Administrator area.
-  The Administrator module focuses on **website maintenance and data management**, such as managing cake categories, adding/updating/deleting cake details, managing users, viewing customer orders and maintaining other website information.

(2) Requirement Analysis

(1) Function Requirement

- The organization has the following basic requirements to be performed by the website. The user can get the following functionality from the website:
- **Information about the online cake ordering system.**
 - **Information about different types of cakes and cake categories** available on the website.
 - **Search facility** to easily find the required cakes.
 - **Admin can search and manage customer information.**
 - **Admin can add, update and delete cake details and category information.**
 - **User can enter the required information** during registration, checkout and order placement.
 - **User can view different cakes, select the required quantity, add cakes to the cart and place orders online.**
 - **User can add cakes to the wishlist** and manage items in the shopping cart.
 - **User can update and view their profile information.**
 - **Secure user login account** for registered customers and administrators.
 - **User can view their order details** and previous orders.
 - **User can provide feedback** about the website or cakes.

About existing manual system:

- ✚ User can view different **cake categories and cake items**.
- ✚ User can **register and login** to the website.
- ✚ User can view cake details and **place orders online**.
- ✚ User can add cakes to the **cart or wishlist**.
- ✚ Admin can **manage users and cake details**.
- ✚ Admin has rights to **manage the overall website**.

❖ **FEASIBILITY STUDIES**

- ✓ Feasibility study determines whether the **Golden Crust Cake's Online Cake Ordering System** can be successfully developed and implemented.
- ✓ It checks the **possibility, cost and benefits** of the new system for customers and administrators.
- ✓ It helps replace the **manual cake-ordering process** with an easy, fast and user-friendly online system.

❖ The feasibility study is needed to

- ✓ To determine whether the **new online cake ordering system** should be developed and implemented.
- ✓ To identify the **potential and limitations of the existing cake-ordering system**.
- ✓ To determine what features and requirements should be **included in the new system**.
- ✓ To identify the **problems and objectives** of the Golden Crust Cake's project.
- ✓ To reduce the possibility of **costly changes and problems at a later stage**.
- ✓ To ensure smooth and proper **implementation of the new system**.

✚ An initial determination is made in a proposal to decide whether the proposed system is **feasible or not**. To determine the feasibility of the proposed **Golden Crust Cake's Online Cake Ordering System** in all respects, the following feasibility factors are considered:

I. Operational Feasibility

II. Technical Feasibility

III. Economic Feasibility

(1) Technical Feasibility:

✚ It is determined by the hardware and supporting software. Hardware requirements: stand-alone computer with enough main memory space & backup storage more than 2 GB to support MySQLi and huge database. Software requirement: MySQLi.

✚ Minimum Hardware Requirement

Component	Minimum Requirement
1.Processor	1.6GHz processor For above
2.Suported Architecture	32bit(* 86) 64*64
3.Memory	512MB for above
4.Hardisk	Total space 250GB Installing space in single drive 5GB

✚ Minimum Software Requirement

Component	Minimum Requirement
1.Operating System	Window XP or above
2.PHP	Server side scripting language
3.MYSQL	Database
4.Xampp	Web Application server
5.Other Tools	Photoshop
6.Web Browser	Chrome

(2) Operational Feasibility:

- Our application has such a user friendly GUI that any person having a sound knowledge of computer can operate the system.

Page	Process	Affected Table	Operation
1.Item	Add,Updated,delete by admin	Login	Update
2.Registration	Upadate by user	Registration	Update
3.Category	Add,Update And Delete by admin	Category	Add,Update And Delete
4.Product	Add,Update And Delete By admin	Product	Add,Update And Delete
5.Contact	Add by User	Contact	Add

Economical Feasibility

Component	Minimum Requirement	Price	Local market Price	Website
1.Processor	1.6 GHz, Intel Pentium	1099	1200	www.ebay.in
2.Hardisk	250GB	2050	2200	www.harddrive.in
3.Memory	4GB RAM	1997	2000	www.sanpdeal.com
4.xampp		Free	Free	www.ebey.com

Software Requirement

Component	Price	Website
1.Window 11 OS	8199	www.Infibean.com
2.Add of Photoshop	5544	www.ebay.in
3.Mozilla Firefox	Free	www.amazon.com
4.xampp	Free	www.sanpdeal.com
5.Dreamweaver	Free	www.ebey.in

Limitation of existing system:

- ❖ Before creating the **Golden Crust Cake's website**, we faced many problems in selling and managing cake orders.
- ❖ People did not know about our **bakery and available cake varieties**.
- ❖ Customers had to visit different cake shops to find their required cake, which **wasted time and effort**.
- ❖ We had to use **advertisements and other promotional methods** to inform customers about our cakes.

Scope of the purposed system:

- ❖ The website provides facilities to **view different types of cakes and cake categories** and place orders online.
- ❖ Users can select cakes, choose the required quantity, add them to the cart and **purchase cakes online**.
- ❖ Users can **give feedback** and contact the administrator for queries.
- ❖ Users can **register and securely login** to the website. After login, they can view cake details and place orders.
- ❖ Users can **view their profile and order details** and provide feedback about the website.
- ❖ Admin can **manage users, cakes and categories** and view customer orders.
- ❖ Admin can **view and manage customer orders** placed through the website.
- ❖ The website provides a **convenient online ordering facility**, allowing customers to order cakes from home without visiting the bakery.

Design

DATA FLOW DIAGRAM

- ✚ A Data Flow Diagram (DFD) is a graphical representation of the "flow" of data through an Information System.
- ✚ A data flow diagram can also be used for the visualization of Data Processing. It is common practice for a designer to draw a context-level DFD first which shows the interaction between the system and outside entities.

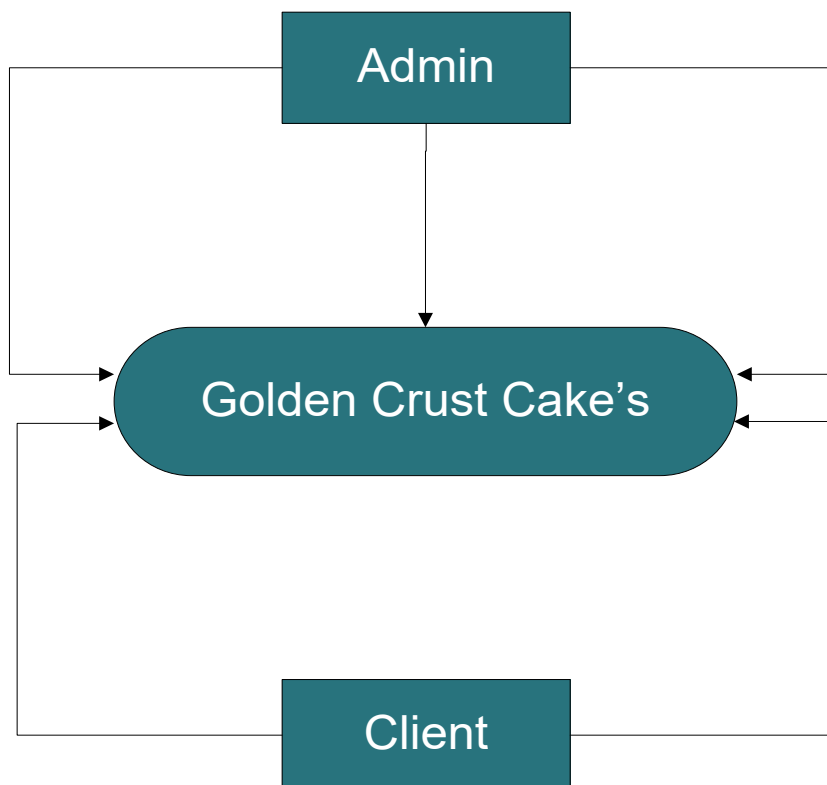

DFD Symbols Description		
Symbol Name	Shape	Description
External Entity		The sharp cornered rectangles(or simply boxes) in a DFD indicates entities. Entities are people things, organizations etc
Process		The Process symbol represents an activity that transforms or manipulates the data (combines, reorders, converts, etc.).
Data Store		Opened sided rectangles in DFD indicates data store. A Data Store is a repository of data.
Data Flow		Arrow symbol in DFD indicate data flow. The Data Flow symbol represents movement of data

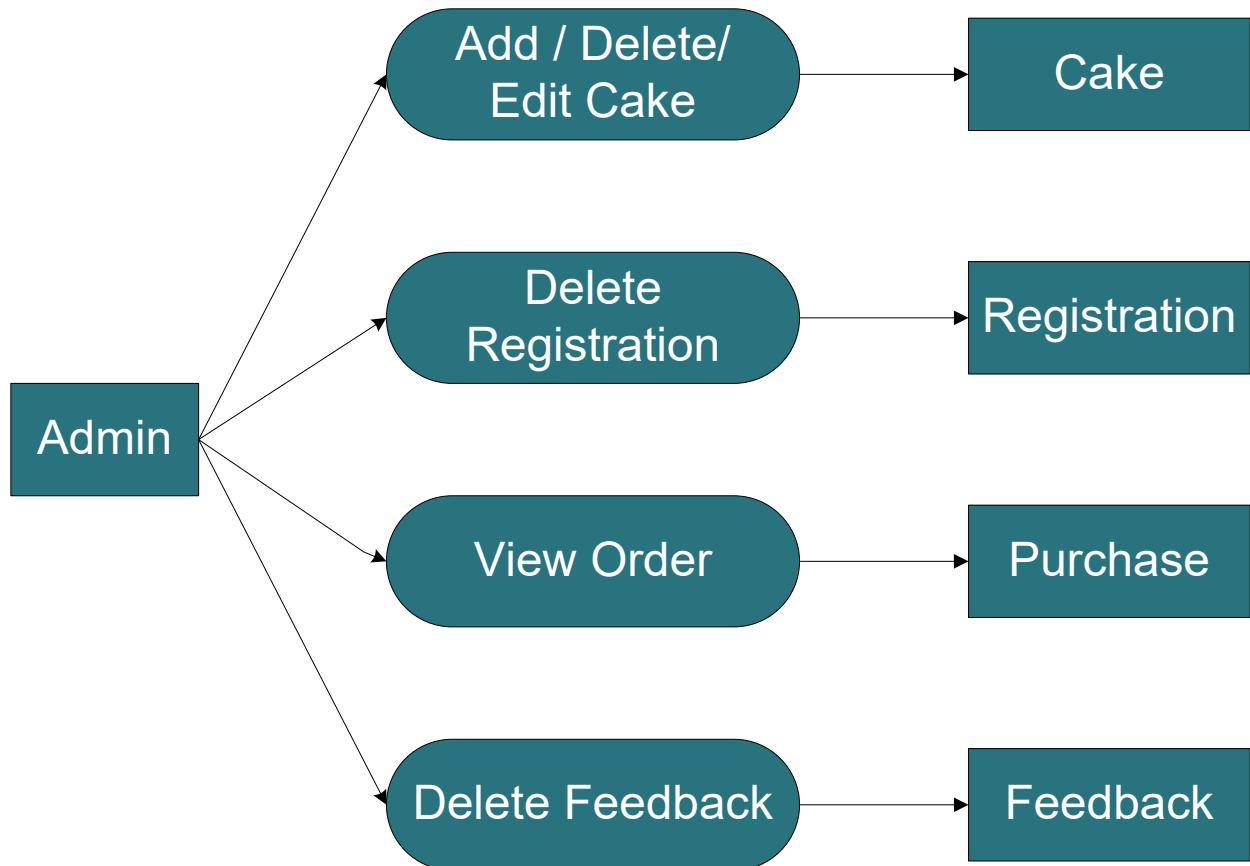

Functional Modeling:-

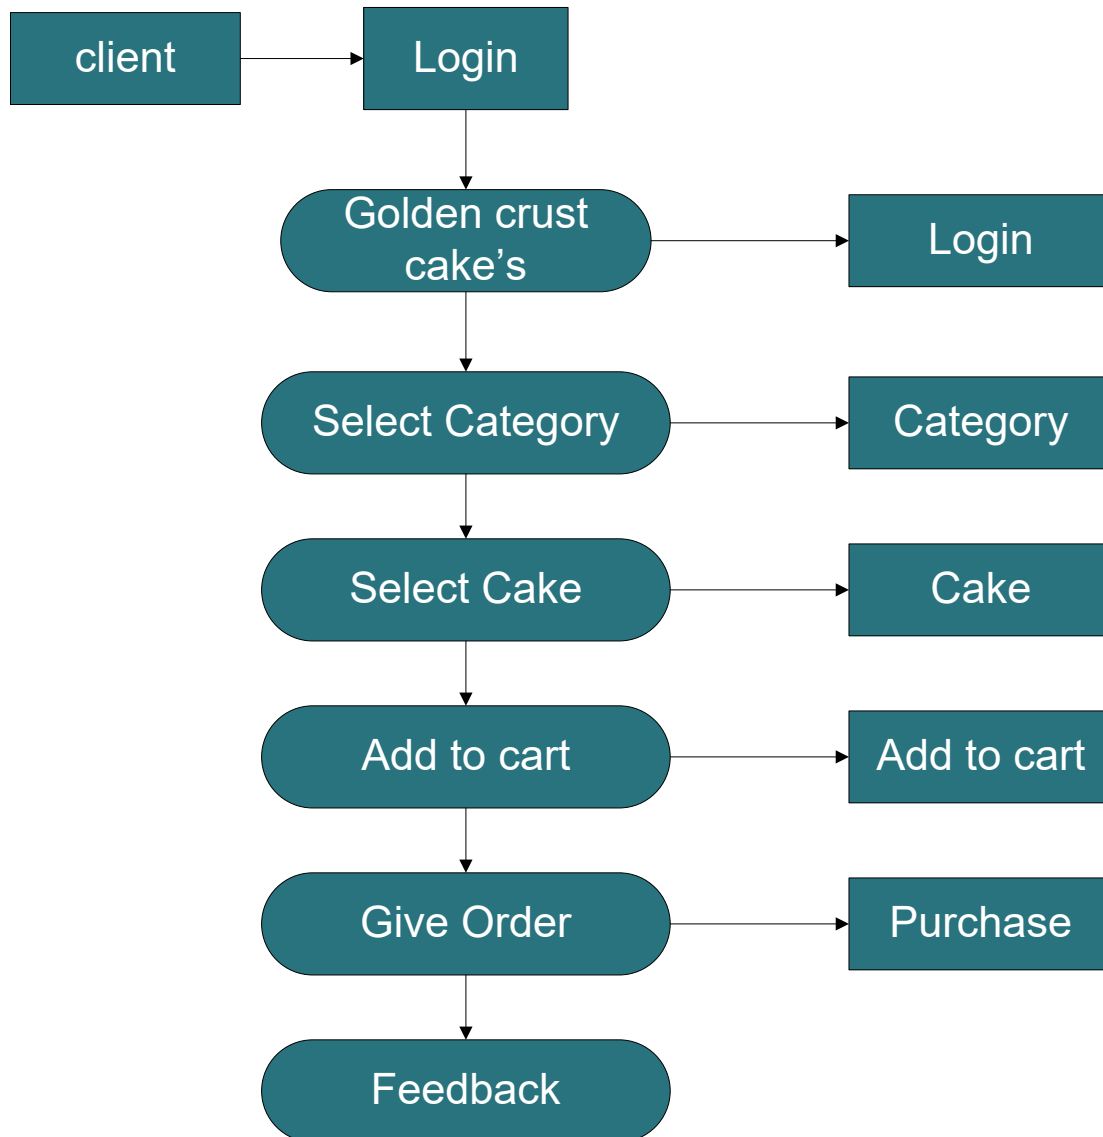

Data Flow Diagram

Object Oriented Approach

(1) DFD for 0 levels

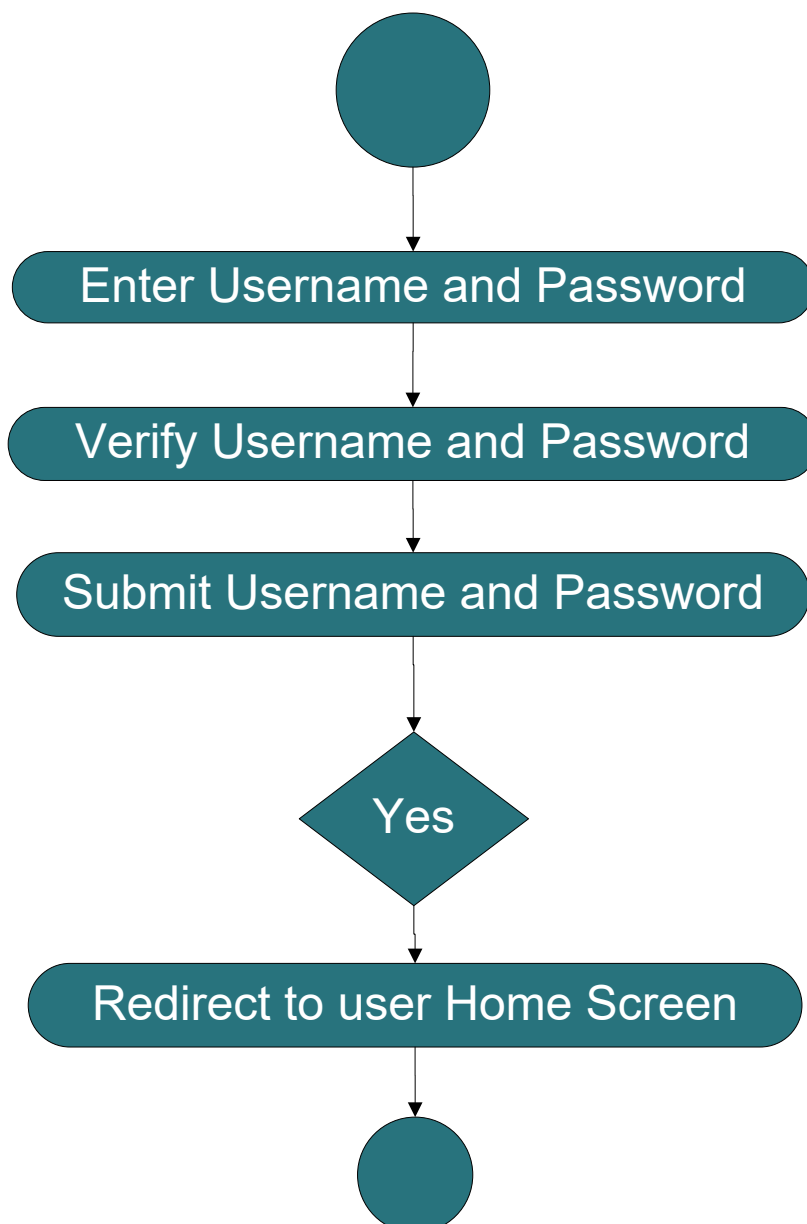

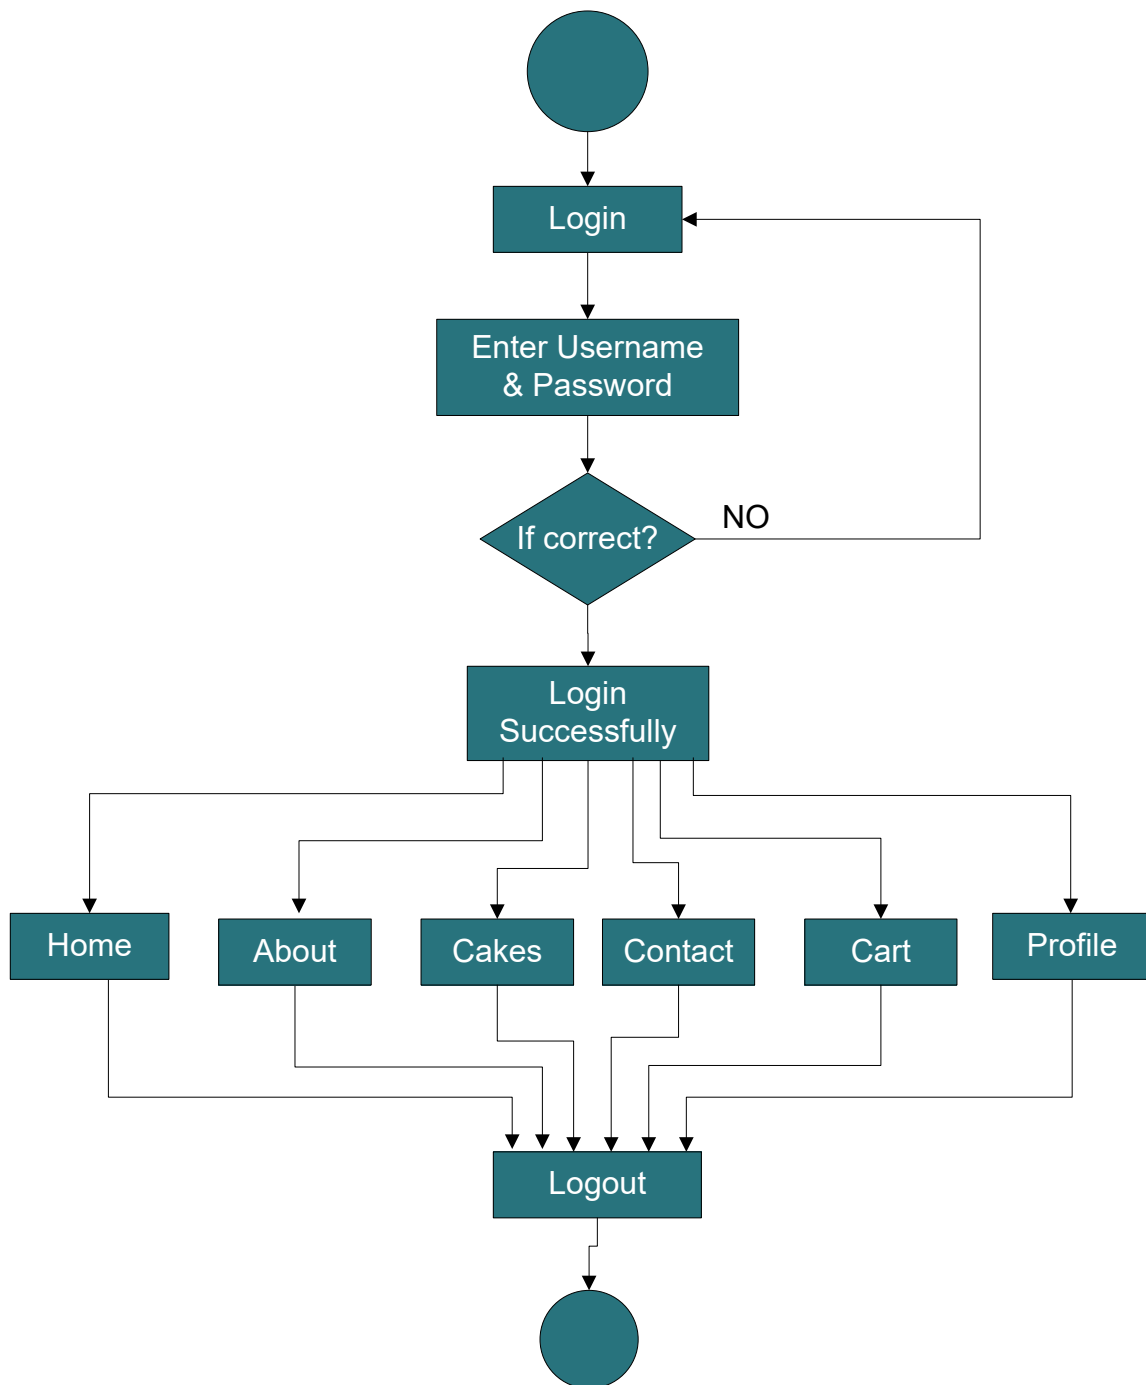

(2) DFD for Admin

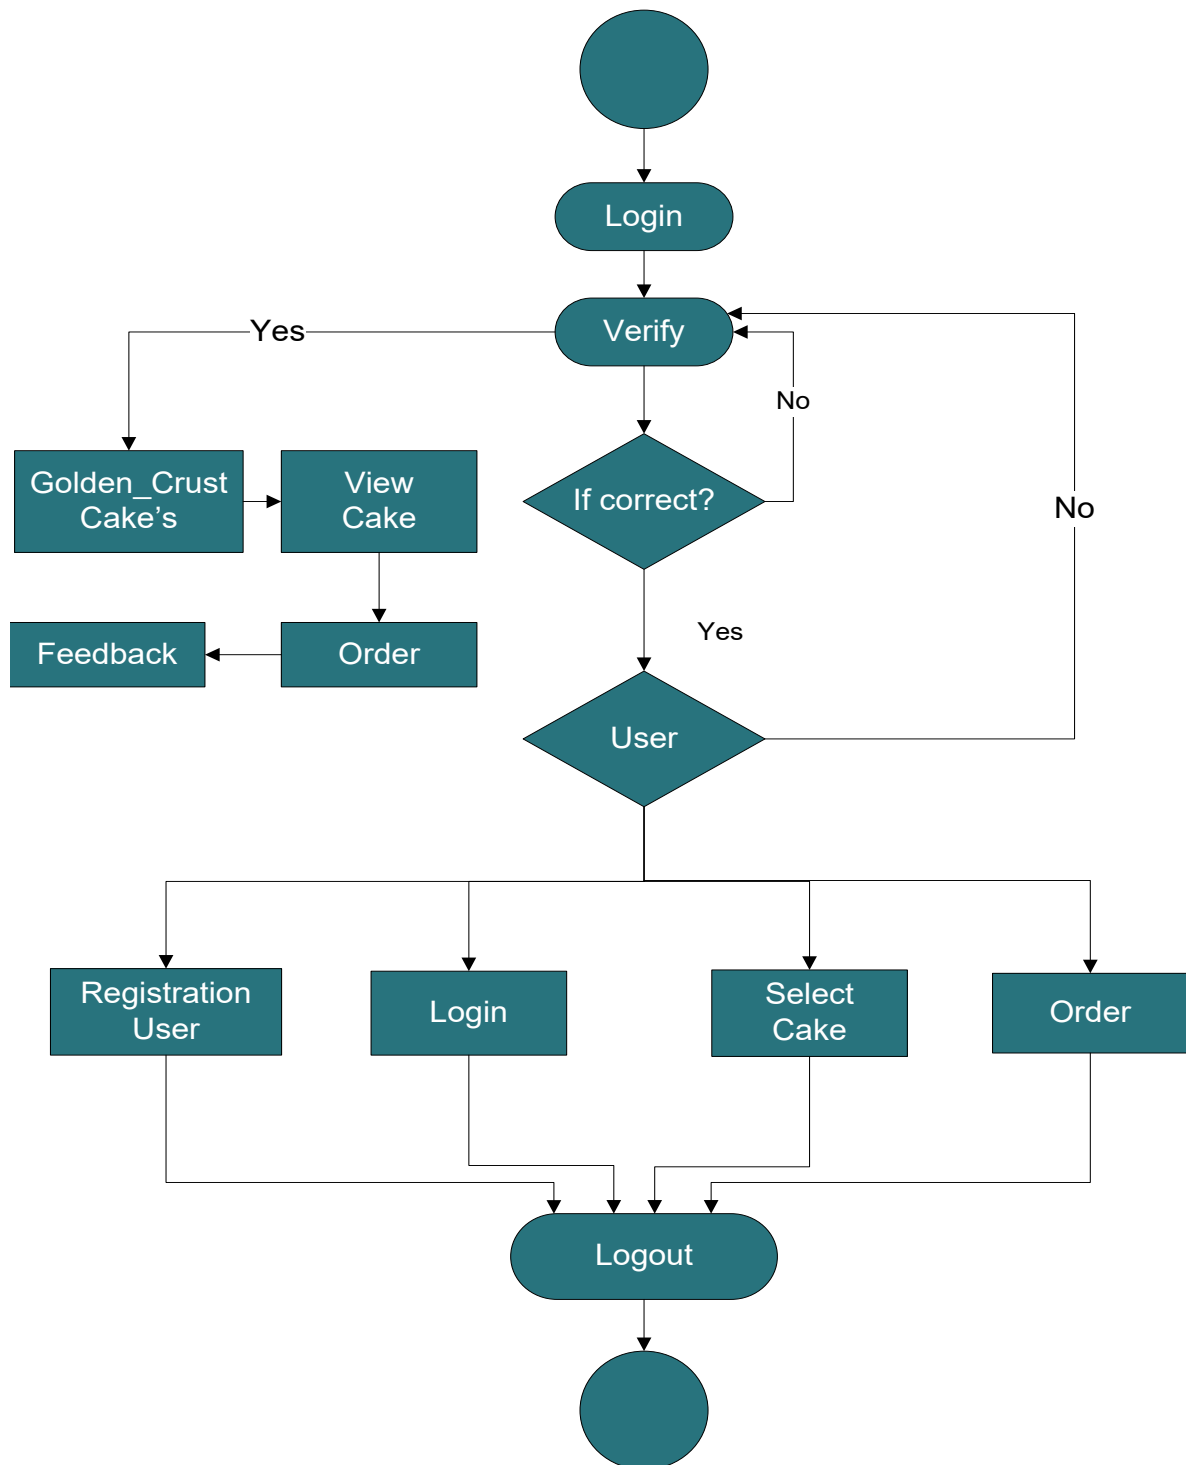

(3) DFD for Client

Data Modeling:**Activity Diagram****▪ Activity diagram for Invalid User:**

Activity diagram for user registration process is described below.

DATA DICTIONARY

DATABASE DETAIL

- ❏ A **data dictionary** is as defined as a "centralized repository of information about data such as meaning, relationships to other data, origin, usage, and format. “
- ❏ A data dictionary can be consulted to understand where a data item fits in the structure, what values it may contain, and basically what the data item means in real-world terms.

[1] Table Name : admin

Description : This table is used to store administration information.

Field Name	Data Type	Extra
Id	int(11)	Auto_increment

SCREEN LAYOUT

ADMIN SIDE

Admin login.php

The image shows a login form for the 'Golden Crust Cakes' admin panel. The form is centered on a pink background. It features the brand name 'Golden Crust Cakes' in a red script font, followed by 'ADMIN PANEL' in a red sans-serif font with crown icons on either side. There are two input fields: one for the username with a person icon and one for the password with a key icon and a toggle eye icon. A red 'Login' button with a right arrow icon is positioned below the fields. At the bottom, a copyright notice reads '© 2026 Golden Crust Bakery-All Rights Reserved'.

add_cake.php

The screenshot shows the 'Add Product' form in the Golden Crust admin panel. The form is divided into two main sections: 'Product Details' and 'Preview'.

Product Details:

- Product Name ***: A text input field with the placeholder 'Enter product name'.
- Rs Price ***: A text input field with the value '0.00'.
- Stock ***: A text input field with the placeholder 'Quantity'.
- Category ***: A dropdown menu with the option 'Select Category'.
- Description**: A text area with the placeholder 'Enter product description'.
- Cake Image ***: A dashed box containing an upload icon and the text 'Click to upload cake image' and 'JPG, PNG, GIF, WEBP (Max 5MB)'.

Preview:

- A dashed box containing a placeholder image icon and the text 'No image selected' and 'Select an image from the form'.
- A yellow star icon and the text 'Image preview will appear here'.

The form is submitted by clicking the 'Add Product' button at the bottom.

WHY CHOOSE US

Why Choose **Golden Crust**?

We bake with passion and deliver perfection

Fresh Cakes
Baked daily with premium ingredients.

Made With Love
Every cake is handcrafted carefully.

Fast Delivery
Quick and safe cake delivery.

Premium Quality
Rich taste and beautiful designs.

OUR TEAM

Meet The Bakers

The passionate people behind every delicious creation

Sasiya Riddhi

Head Baker & Founder

20+ years of pastry magic. Loves vintage recipes and classic flavors.

Degama Bansi

Cake Designer

Former architect, now crafting edible masterpieces with artistic flair.

Rathod Riya

Flavor Specialist

Spice & citrus alchemist who creates unforgettable flavor combinations.

CELEBRATE WITH US

Ready To Make Your Special Moments Memorable?

Order your favorite cake today and let us add sweetness to your celebration. Every cake tells a story of love and happiness.

Order Your Cake

Get In Touch

Golden Crust

Freshly baked cakes crafted with love, premium ingredients and unforgettable taste.

TESTING

White-box Testing

White-box testing is a testing method in which the internal code, program logic and structure of the system are checked. The tester has knowledge of the source code and checks whether different conditions, statements and functions work correctly.

In the Golden Crust Cake's project, white-box testing can be used to check the PHP code, database operations and internal program logic.

White-box testing includes:

- **Condition Testing:** Checks whether different conditions such as login validation and order conditions work correctly.
- **Unit Testing:** Tests individual functions or modules separately.
- **Code Testing:** Checks whether the written PHP code works correctly.
- **Path Testing:** Checks different paths through the program.
- **Loop Testing:** Checks loops and repeated operations in the program.

Examples of areas tested:

- Login validation
- Registration validation

Black-box Testing

Black-box testing is also called **Functional Testing**. In this method, the tester checks the **input and output of the system without checking the internal source code**.

The main purpose is to verify whether the website performs all functions according to the requirements.

In the Golden Crust Cake's project, black-box testing is used to test the following functions:

- **User Registration:** Checks whether a new user can register successfully.
- **User Login:** Checks valid and invalid username/password.
- **Cake Selection:** Checks whether users can view and select cakes.
- **Add to Cart:** Checks whether selected cakes are added correctly.
- **Cart:** Checks quantity, price and total amount.
- **Checkout:** Checks whether customer and delivery details are accepted.
- **Order:** Checks whether the user can successfully place an order.
- **Payment Method:** Checks whether the selected payment method is stored correctly.
- **Order Confirmation:** Checks whether order confirmation is displayed.
- **My Orders:** Checks whether users can view their previous orders.
- **Feedback:** Checks whether users can submit feedback or queries.

Test Case

No	Test Case	Description	Prerequisites	Input data	Severity	Priority	Expected Result	Actual Result	Pass /fail
1	name	To check that f name field have cursor	Internet should have available	-	Low-level	Low	Cursor should display in the fname	Cursor not able to display in the fname	Fail
2	Password field	To check that Password Can contain Space or special character	Password Must Entered	mmmm	High-level	High	Password Can't Have Space or special character	Password Have not Space or special character	pass
3	Mo_no	To check Minimum boundary Ofmo_no	Mo_No	1234567894	Low-level	High	Mo_No must be a 10 digit long.	Mo_No is 10 digit long	Pass
4	DOB	To check That dob have dd-mm-yyformat e	dd-mm-yy	-	Low-level	High	DOB must entered digit or character	DOB is not valid format	fail
5	Country	To check that Country have character	Country must be enter	nnnrrrji	Low-level	High	Country Shoule have display text area format	Country Display in The text area	fail
6	User name	To check user Name can	Internet	-	Low-level	Low	Username can't be blank.	Username is blank	Fail

		be left blank.							
7	Email	To check that email is valid or not.	Internet should have available	sssss	Low-level	Low	Email must Be in valid format	Email is not in valid format	Fail

Testcase of Registration form:

Testcase of Login form:

No	Test Case	Descripti on	Prereq uisit	Input data	Serve rity	Prio rity	Expec ted Result	Acutu al Result	Pass /fail
1	User name field	To check that User name field can't be blank	Browser should have availabl e	-	Lowlev el	Low	Should not blank the user name	Should not blank the user name	Pass
2	Passw ord field	To check that user enter minimum 6 character.	Browser should have availabl e	Riya95 25	Lowlev el	Low	User enter characte r and digit .	User enter characte r and digit.	pass
3	User name field	To check that user can't enter first digit.	Browser should have availabl e	5855	Lowlev el	Low	User can't enter digit.	User can enter digit	Fail
4	Passw ord field	To check that user can't enter any special character.	Browser should have availabl e	riddhik arangiy a@ 25	Lowlev el	Low	User can't I Enter not space	User enter space	Fail

Future Enhancements

- ✓ In future, we can provide **online payment facilities** such as UPI, debit card and credit card.
- ✓ We can improve the **Cash on Delivery** facility for customers.
- ✓ We can add **new cake categories** such as Birthday Cakes, Wedding Cakes, Anniversary Cakes and Custom Cakes.
- ✓ We can add more **cake products and new designs** to the website.
- ✓ We can provide a **cake customization facility** according to customer requirements.
- ✓ We can add **order tracking** so users can check their order status.
- ✓ We can improve the **search and filter facility** to help users find cakes easily.
- ✓ We can add **special offers, discounts and coupon codes**.
- ✓ We can improve the website design and make it more **user-friendly and attractive**.
- ✓ In future, we can develop a **mobile application** for the Golden Crust Cake's online ordering system.
- ✓ We can add **customer reviews and ratings** for cakes.
- ✓ We can improve the website security and database management..

Conclusion

The Golden Crust Cake's project is an online cake ordering system developed to make cake purchasing easy and convenient for customers.

- The website provides information about different cakes, categories, prices and availability.
- Users can register and login to the website.
- Users can view cakes, select their required cake and add it to the cart.
- Users can enter delivery details and place an order online.
- The system provides Cash on Delivery as a payment option.
- Users can view their order details and order status.
- The website saves customers' time and reduces the need to visit a cake shop physically.
- The system also helps the admin manage products, categories, users and orders.
- Overall, the project provides a simple and convenient way to order cakes online.
